"Crystal structure of Bacillus stearothermophilus alpha-amylase:
possible factors determining the thermostability.";

J. Biochem. 129:461-468 (2001).

I- CATALYTIC ACTIVITY: Endohydrolysis of 1,4-alpha-glucosidic

IIIKages in oligosaccharides and polysaccharides.

I- COPACTOR: Binds 3 calcium ions and 1 sodium ion per subunit.

I- SUBUNIT: Monomer.

I- SUBUNIT: SIMILARITY: Belongs to family 13 of glycosyl hydrolases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Suominen I., Karp M., Lautamo J., Knowles J., Mantsaelae P., "Thermostable alpha amylase of Bacillus stearcthermophilus: cloning, expression, and secretion by Escherichia coli."; (In) Chaloupka J., Krumphanzl V. J. Gen. Microbiol. 139:1401-1407(1993).
-:- CAPALYTIC ACTIVITY: Endohydrolysis of 1,4-alpha-glucosidic linkages in oligosaccharides and polysaccharides.
-:- COPACTOR: Binds 1 calcium ion per subunit (By similarity).
-:- SUBUNIT: Monomer (By similarity).
-:- SUBUNIT: Monomer (By similarity).
-:- SUBCILIULAR LOCATION: Cytoplasmic.
-:- SIMILARITY: Belongs to family 13 of glycosyl hydrolases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     SEQUENCE FROM N.A.

CATALYTIC ACTIVITY: Endohydrolysis of 1,4-alpha-glucosidic linkages in oligosaccharides and polysaccharides.

COPACTOR: Binds 3 calcium ions per subunit (By similarity).

SUBUNIT: Monomer.

TISSUE SPECIFICITY: Most abundant in embryo-derived callus tissue.

DEVELOPMENTAL STAGE: Expressed at a high level during germination in the aleurones cells under the control of the plant hormone gibberellic acid and in the developing grains at a low level.

SIMILARITY: Belongs to family 13 of glycosyl hydrolases.
                                                                                                                                                                                                                                                                                                                                                                                                                           S14958; S14958.

"Nucleotide sequence of the alpha-amylase gene from Vigna mungo

"lant Physiol. 103:1459-1459 [1993].

-i- CANTALYTIC ACTIVITY: Endobydrolysis of 1,4-alpha-glucosidic

linkages in oligosaccharides and polysaccharides.

-i- COPACTOR: Binds 3 calcium ions per subunit (By similarity).

-i- SUBUNIT: Monomer (By similarity).

-i- SIBUNATIY: Belongs to family 13 of glycosyl hydrolases.

T.; e from Vigna mungo.

                                                                           DEVELOPMENTAL STAGE: Expressed at a high level during germinal in the aleurones cells under the control of the plant hormone gibberellic acid and in the developing grains at a low level. SIMILARITY: Belongs to family 13 of glycosyl hydrolases.
                                                                                                                                                                                                          germination.

CATALYTIC ACTIVITY: Endohydrolysis of 1,4-alpha-glucosidic linkages in oligosaccharides and polysaccharides.

COFACTOR: Binds 3 calcium ions per subunit (By similarity)
                                                                                                                                                                            SUBUNIT: Monomer.

TISSUE SPECIFICITY: More abundant in germinating seeds the TISSUE SPECIFICITY: More and callus.

Young leaves and callus.

DEVELOPMENTAL STAGE: Expressed at a high level during ger in the aleurones cells under the control of the plant hor gibberellic acid and in the developing grains at a low legibberellic acid and in the developing stains at a low legibberellic acid and in the developing stains at a low legibberellic acid and in the developing stains at a low legibberellic acid and in the developing stains at a low legibberellic acid and in the developing stains at a low legibberellic acid and in the developing stains at a low legibberellic acid and in the developing stains at a low legible statement and the statement at a low legible statement at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    germination.

CATALYTIC ACTIVITY: Endohydrolysis of 1,4-alpha-glucosidic linkages in oligosaccharides and polysaccharides.

COPACTOR: Binds 3 calcium ions per subunit (By similarity)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Multigene

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            SUBCUNIT: Monomer (By similarity).

SUBCELLULAR LOCATION: Extracellular.

DEVELOPMENTAL STAGE: Production of alpha-amylase is hormonally regulated. Germinating embryos produce the hormone gibberellic acid, which within 10 hours stimulates the aleurone cells covering the endosperm of the seed to produce alpha-amylase. The enzyme then degrades the starch within the endosperm for use by the developing plant embryo.

MISCELLANEOUS: There are at least 4 types of alpha-amylase in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               SIMILARITY: Belongs to family 13 of glycosyl hydrolases.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Score

Use of an oxidation stable alpha-amylase - for simultaneous desizing bleaching or scouring of fabrics contg. starch or starch derivs.

Claim 8; Page 25; 37pp; English

Oxidation stable alpha amylases can be used for the simultaneous desizing and bleaching or scouring of a fabric comprising starch or starch derivatives. They exhibit a better heat stability, especially in the presence of oxidising agents. They are obtained from a parent alpha amylase by replacing one or more methionine residues with any amino acid different from Cys or Met, preferably Leu, Thr, Ala, Gly, Ser, Ile or Asp. The parent alpha amylase is derived from a Bacillus species. This sequence is the wild type (unmodified) alpha amylase. (Updated on 16-OCT-2003 to standardise OS field)

Sequence 514 AA;

The enzymes have one or more amino acid residues added, deleted or substituted. The variants can also be used for textile desizing prior to scouring, bleaching and dyeing. The variants have improved thermostability, acid/alkaline stability; low temperature optimum, pH optimum, higher hydrolysis velocity and improved tolerance to other composition constituents, e.g. oxidation agents. This protein comprises the Termamyl-like alpha-amylase of Bacillus CC stearothermophilus. The invention relates to novel variants of Termamyl-CC like alpha-amylases that have alpha-amylase activity and exhibit an collection in at least one property selected from: substrate specificity; CC binding or cleavage pattern; thermal stability; pH/activity or CC pH/stability profile; stability towards oxidation; Ca2+ dependency and specific activity. The variant has one or more mutations from those CC listed in the specification in relation to Bacillus licheniformis CC Termamyl (see AAW31404). Also claimed are constructs comprising DNA CC conding the variant (see AAV02471-73), and recombinant expression CC vectors and transformed cells containing the DNA. The Termamyl-like alpha CC camylase variant is useful as a detergent additive and can also be used CC in industrial starch processing e.g. liquefaction (claimed) or CC saccharification to produce sweeteners, and in textile desiing CC (claimed). (Updated on 17-OCT-2003 to standardise OS field)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             5
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          뮍
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Ś
                                                     The present sequence is a parent alpha-amylase from which mutants with CC increased stability at acidic pH, low calcium concentration and high CC temperatures have been derived. A variant may contain mutations in one or more solvent exposed amino acid residues to increase the overall chydrophobicity of the enzyme or the overall number of methyl groups in CC the side chains of exposed residues may be increased. The mutations can be incorporated by site-directed mutagenesis or by random mutagenesis. As a result of their increased stability, the variants are suitable for the CC industrial processing of starch, i.e. starch liquefaction and CC saccharification. They may also be useful for washing, dishwashing and textile desizing. Hybrid alpha-amylases comprising partial amino acid csequences derived from two or more alpha-amylases have also been created in order to increase enzyme stability. Note: According to the specification, the present sequence and the sequence shown in AAY99604 are the same. (Updated on 12-SEP-2003 to standardise OS field)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Variant of parent termamyl-like alpha amylase useful for washing, textile desizing and starch liquefaction, comprising alterations in one or more solvent exposed amino acid residues.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Svendsen A,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        This sequence represents a termamyl-like alpha amylase. The invention CC relates to a variant (I) of parent Termamyl-like alpha-amylase comprising CC alteration at one or more of the positions W13, G48, T49, S50, Q51, A52, CC D53, V54, G57, G107, G108, A111, S168 and M197. The alterations in (I) CC are independently an insertion of an amino acid downstream of the amino CC acid which occupies the position or deletion or substitution of the amino CC acid which occupies the position with a different amino acid. The variant CC has alpha-amylase activity. (I) or compositions containing it are useful in starch liquefaction, in detergent compositions such as laundry, dish CC washing and hard surface cleaning compositions, ethanol production such CC as fuel, drinking and industrial ethanol production, desizing of ceatiles, fabrics or garments. (I) exhibits a reduced capability of CC cleaving a substrate close to the branching point, and further exhibits improved substrate specificity and/or improved specific activity relative CC to the parent alpha-amylase. (Updated on 11-SEP-2003 to standardise OS CC field)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Query Match 100.0%;

                                                                                                                                                                                                                                                                                                                                                                 -amylase (EC 3.2.1.1) (I) comprising an alteration at one or more positions of a group of 31 possible amino acid positions. The alteration in (I) may be at Ang28, Arg181, Asn174, Arg181, Gly182, Asp183, Gly184, Arg186, Trp189, Asn195, Met202, Tyr298, Asn299, Lys302, Ser303, Asn306, Arg310, Asn314, Arg320, His324, Glu345, Tyr396, Arg400, Trp439, Arg444, Arg310, Asn314, Arg320, His324, Glu345, Tyr396, Arg400, Trp439, Arg444, Asn445, Lys446, Gln449, Arg454, Asn471, or Asn484. (I) can be used for washing and/or dishwashing, textile desizing, and starch liquefaction. (I) is useful as a component in hard surface cleaning detergent composition, and for producing sweeteners and ethanol from starch. (I) has altered solubility, preferably increased solubility, in particular under washing, dish washing or hard surface cleaning conditions. The present sequence represents a Bacillus stearchermophilus termamyl-like alpha-amylase which is used in the exemplification of the present invention. (Updated on 29-AUG-2003 to standardise OS field)

The invention relates to a variant of parent TERMAMYI-like alpha-amylase comprising an alteration at regions 186-193, 261-276, 283-293 or 334-339, or at position 234, where the variant has alpha-amylase activity and each position corresponds to a position of a parent Termamyl-like alpha-amylase sequence having a Bacillus lichaniformis alpha-amylase sequence of 483 amino acids, given in specification. The variant alpha-amylase a detergent additive comprising the variant or a detergent composition comprising the variant, is useful for washing and/or dishwashing or textile desizing. The alpha-amylase is useful for starch liquefaction or ethanol production and as a component in a hard surface cleaning the variant has altered alpha-1, 6-D-glucosidic branch linkage cleavage activity on amylopectin, preferably increased alpha-1, 6-D-glucosidic branch linkage cleavage activity of amylopectin or a limit dextrin
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    TERMAMYL; alpha-amylase; detergent; dishwashing; textile desizing; starch liquefaction; ethanol production; hard surface cleaner; swe amylopectin; limit dextrin; NOVAMYL; BSG.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Geobacillus stearothermophilus

These alpha amylases are Termamyl-like alpha-camylase and they have been pre-oxidized. The alpha amylase is useful for CC producing a maltodextrin or glucose syrup, by treating starch with a pre-CC oxidized alpha-amylase until a product with a DE between 5-45 has been provided and/or until a product with a DE between 5-45 has been CC daipha amylase is useful for product tomprises a maltodextrin with a DE of CC 18.5 and/or a maltodextrin with a molecular weight of between 5-30 of CC daipha amylase is useful for producing a maltodextrin or glucose syrup, CC where the glucose syrup is useful as an ingredient in food, feed or CC pharmaceuticals. Glucose syrup is useful in confectionery such as CC candies, beverages such as isotonic drinks, bakery such as cereal bars, CC dairy and ice cream such as coffee whiteners, conventional foods such as CC salad dressings, and food ingredients and preparations such as cured CC mear, fermented meat, spices and seasoning encapsulated flavours.

                                                                                                                                                                                                                                                                                                                                                                                         This invention relates to variants of a parent Termamyl-like alpha-amylases. These are used for starch liquefaction, ethanol production, detergent, and textile desizing. The amylases have altered stability, particularly at high temperatures from 70-120plusoC and low pH in the range from pH 4.0-6.0. The present sequence is a termamyl-like-alpha-amylase.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             514
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      480
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 420
```

The invention relates to a purified polypeptide with alpha-amylase activity and the polynuclectide encoding it. The polypeptide is useful for hydrolyping starch linkages, for catalysing the breakdown of a starch, for modifying small molecules, for liquefying starch, for washing an object, for textile desizing, for treating lignocellulosic fibers, for improving fibre properties, for enzymatic de-inking of recycled paper pulp, for producing a high-malcose or high-glucose syrup or a mixed syrup, and for increasing the flow of production fluids from a subterranean formation by removing a viscous, starch-containing, damaging fluid formed during production operations and found within the subterranean formation which surrounds a completed well bore. The polypeptide is also useful for preparing a dough or a baked product prepared from the dough and in corn-wet milling processes, detergents,
